

# Lab - Use the OWASP Web Security Testing Guide

## Objectives

In this lab, you will complete the following objectives:

- Part 1: Investigate the WSTG
- Part 2: Scan a Website and Investigate Vulnerability References

## Background / Scenario

The Open Worldwide Application Security Project ([OWASP](https://owasp.org)) nonprofit foundation developed the Web Security Testing Guide (WSTG) to test the most common web application security issues. The guide is useful for various stakeholders such as developers, software testers, security specialists, and project managers. The OWASP Web Security Testing Guide is a free tool that is available to organizations and individuals.

The testing guide is also a useful tool for ethical hacking. Ethical hackers can use the guide to test their clients' running web applications for common security vulnerabilities.

In this lab, you will review the WSTG and then scan a web application for vulnerabilities using the OWASP Zed Attack Proxy (ZAP). You will investigate some of the vulnerabilities that were discovered and reference one back to the WSTG.

## Required Resources

- Kali VM customized for the Ethical Hacker course
- Internet access

## Instructions

### Part 1: Investigate the WSTG

#### Step 1: Explore the OWASP WSTG Project Site.

- Navigate to the OWASP Web Security Testing Guide site at <https://owasp.org/www-project-web-security-testing-guide/>.
- Review the information on the main page.  
What is the purpose of the OWASP Web Security Testing Guide?

Answer Area

<!--><!-->

- Click the **Release Versions** tab.

What is the current release version of the guide?

Answer Area

<!--><!-->

d. Click the most recent released version and review the Table of Contents.

## Step 2: Review the content.

a. Click and review the **Foreword** by Eoin Keary in the Table of Contents.  
According to Mr. Keary, who is initially responsibility for application security?

Answer Area

<!--><!-->

b. Return to the **Table of Contents** and select **Introduction**.  
Security testing should be included in which phase(s) of the Software Development Lifecycle (SDLC)?

Answer Area

<!--><!-->

What three factors should be tested in an effective testing program?

Answer Area

What four testing techniques are presented in the introduction of the OWASP Web Testing Guide? Complete the table with the techniques and their definitions. Define the techniques in your own words.

## Part 2: Scan a Website and Investigate Vulnerability References

In this part of the lab, you will conduct a vulnerability scan using the Zed Attack Proxy (ZAP). Your target is an intentionally vulnerable website that is available on your VM. You will then use WSTG to learn more about a vulnerability that you discovered.

### Step 1: Open ZAP and start a scanning.

- Start the Kali VM as needed. Navigate to the Kali menu. Search for **zap** and start the OWASP Zap scanner.
- Click the topmost radio button to persist the session. This means that you can return to the session at a later time.
- Close the Manage Add-ons dialog window.
- In the ZAP main window, click the **Automated Scan** to initiate a scan.
- In the **URL to Attack** field, enter **172.17.0.2/dvwa**.
- Click the **Attack** button to begin the scan. The scan will should take less than 10 minutes to complete.

First, ZAP uses a web spider to crawl the URL to identify the resources that are available there. It then will apply vulnerability scans to each resource.

### Step 2: Investigate the results.

- a. Select the **Alerts** tab if it is not already selected. When the scan finishes, you will be automatically switched to there.

How many alerts were returned?

Answer Area

<!--><!-->

- b. Locate and click the **Remote Code Execution – CVE-2012-1823** alert. Scroll through the details of the alert.

What is the source of this vulnerability?

Answer Area

<!--><!-->

How can this vulnerability be exploited?

Answer Area

<!--><!-->

- c. Scroll down to the Alert Tags section of the vulnerability. Note the WSTG key and value. Click the value and use the Ctrl-C keys to copy the URL to the clipboard.
- d. Open a browser and paste the URL in the URL. Navigate to the WSTG site and read about the vulnerability and methods of testing for it. Review this information about the vulnerability to understand what WSTG offers to the penetration tester.

## Reflection Questions

1. In what ways can the OWASP Web Security Testing Guide assist organizations to secure their applications?
